— FROM EXCEL TO R

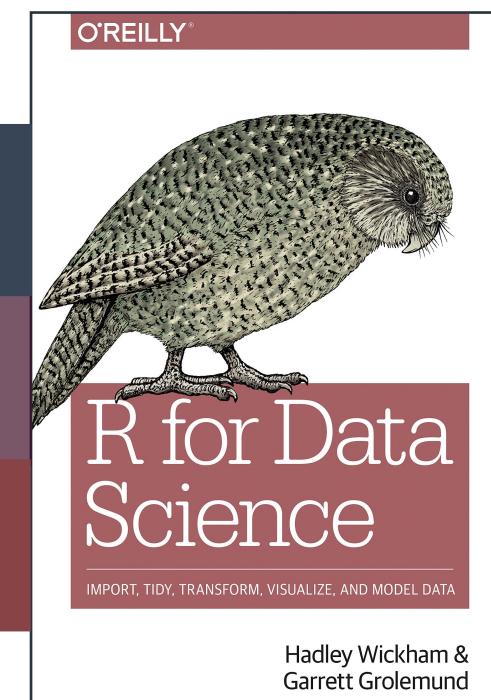

# THE PRACTICALS

Two days: 9.00-16.30. There will be coffee breaks, we promise ☕

“R for Data Science” - a generally useful book on R, also for this course

The course is build on hands-on presentations (.R, .Rmd) & exercises

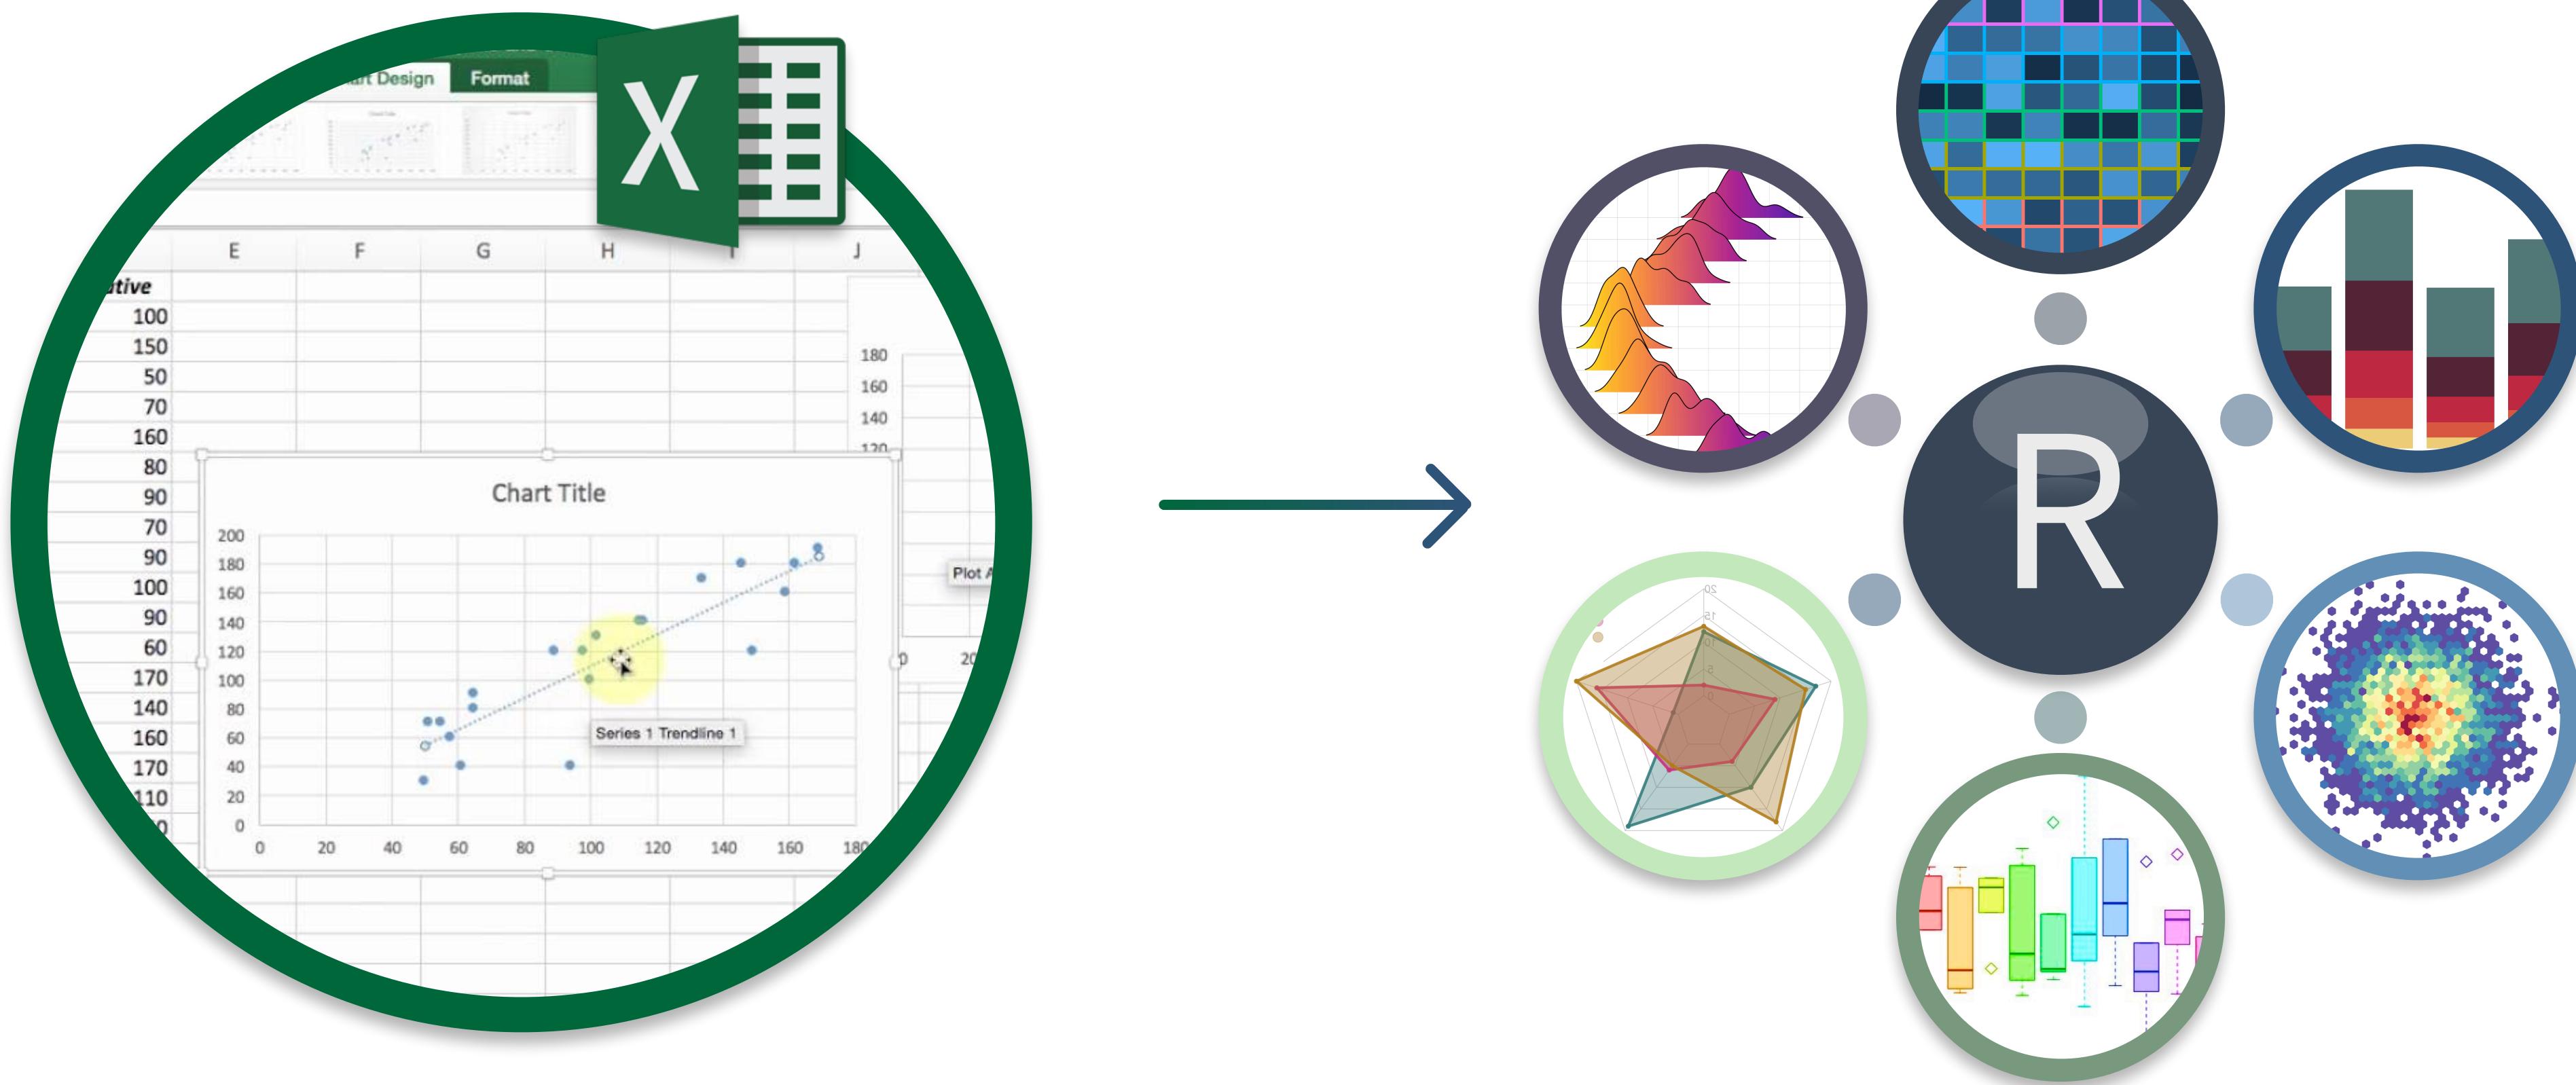

→ Download and install the newest version of R (<https://cran.r-project.org/>)

→ Download and install the newest version of R-studio (<http://www.rstudio.com/download>)

→ Download the course material and place it somewhere you can find it again!  
[https://github.com/Center-for-Health-Data-Science/FromExceltoR\\_2022](https://github.com/Center-for-Health-Data-Science/FromExceltoR_2022)

# WELCOME TO FROM EXCEL TO R

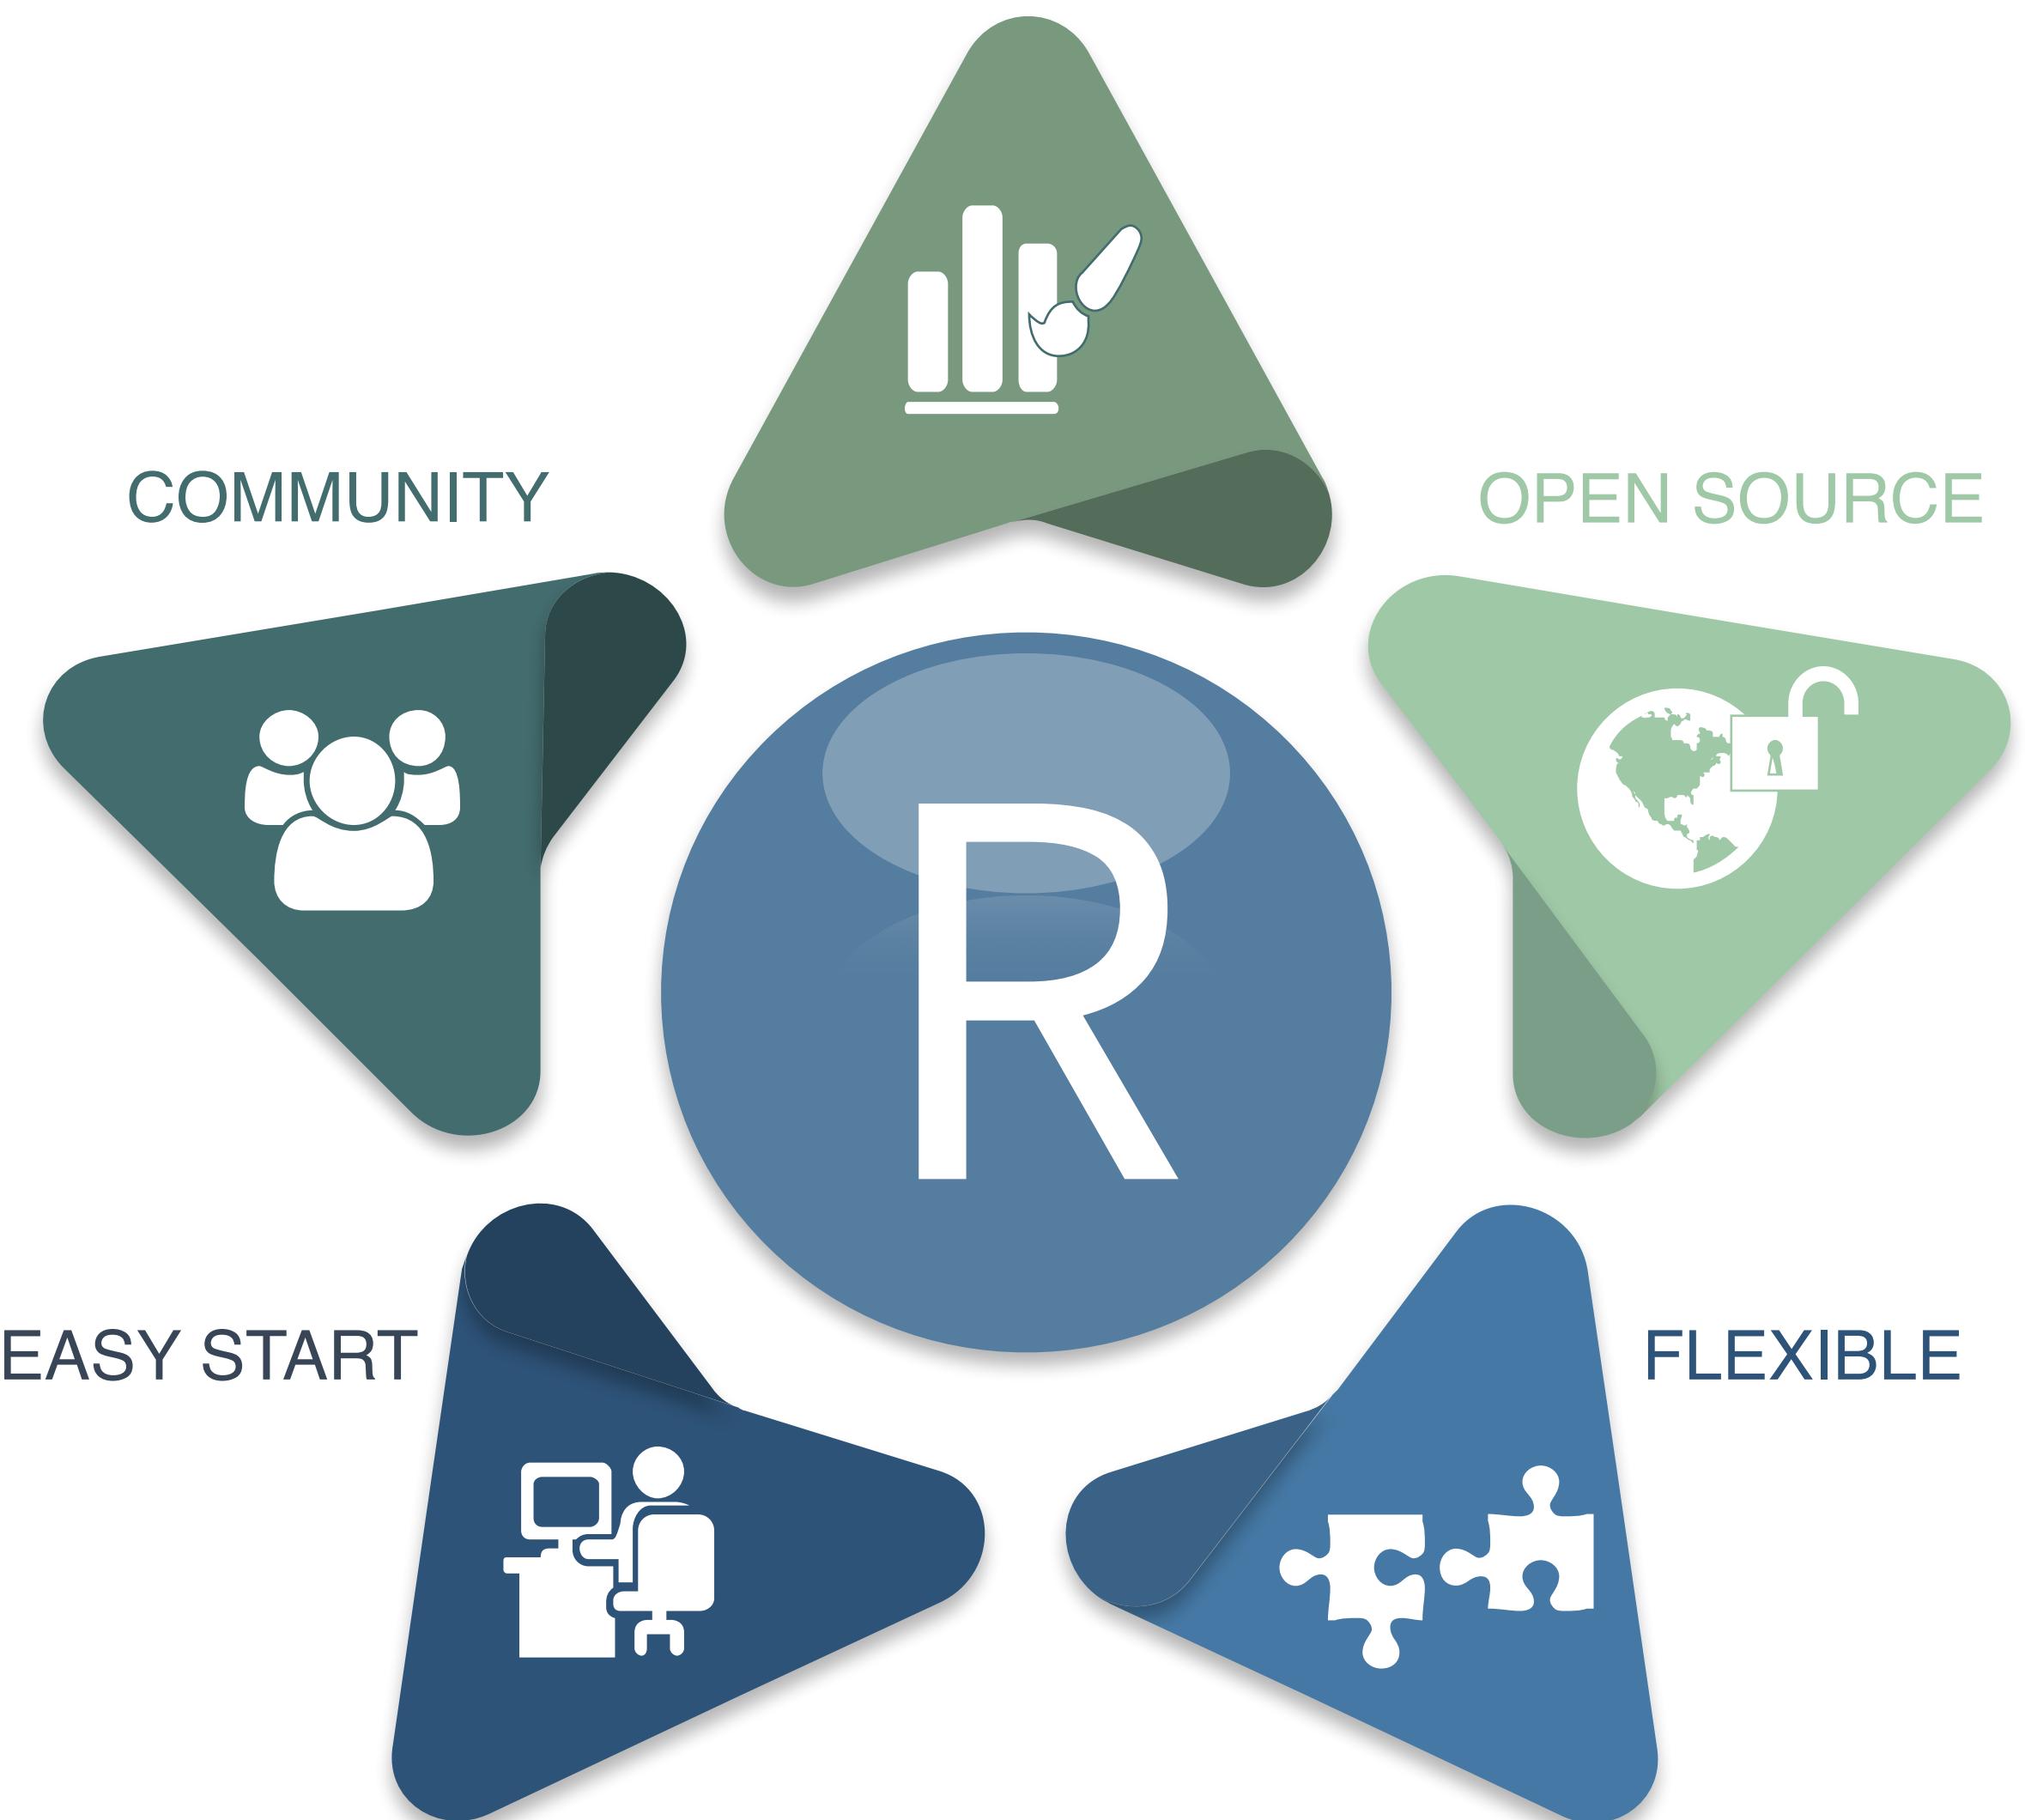

## WHY R ?

- **Open Source**
- **Easy to get started with:**  
Compatible with all systems, great support
- **Large Community:**  
R-packages, pipelines, tutorials, help pages
- **Flexible Language:**  
Plugins, C++, Python, git/github, markdown
- **Customisable Graphics**

R has its **limitations**, but now fewer than ever

## READING AND WRITING DATA

Input	Output	Description
<code>df &lt;- read.table('file.txt')</code>	<code>write.table(df, 'file.txt')</code>	Read and write a delimited text file.
<code>df &lt;- read.csv('file.csv')</code>	<code>write.csv(df, 'file.csv')</code>	Read and write a comma separated value file. This is a special case of read.table/write.table.
<code>load('file.RData')</code>	<code>save(df, file = 'file.Rdata')</code>	Read and write an R data file, a file type special for R.

## SELECTING ELEMENTS

**x[4]** The fourth element.

**x[-4]** All but the fourth.

**x[2:4]** Elements two to four.

**x[!(2:4)]** All elements except two to four.

**x[c(1, 5)]** Elements one and five.

### By Value

**x[x == 10]** Elements which are equal to 10.

**x[x < 0]** All elements less than zero.

**x[x %in% c(1, 2, 5)]** Elements in the set 1, 2, 5.

## R-BASE FUNCTIONS

**log(x)** Natural log.

**exp(x)** Exponential.

**max(x)** Largest element.

**min(x)** Smallest element.

**round(x, n)** Round to n decimal places.

**sig.fig(x, n)** Round to n significant figures.

**cor(x, y)** Correlation.

**sum(x)** Sum.

**mean(x)** Mean.

**median(x)** Median.

**quantile(x)** Percentage quantiles.

**rank(x)** Rank of elements.

**var(x)** The variance.

**sd(x)** The standard deviation.

## GETTING HELP

1. Ask us, and ask people next to you.
2. Look at the R presentations we go through.
3. Use the **cheat sheets** in this presentation and online: <https://rstudio.com/resources/cheatsheets/>

**Google it!** Most important skill of all.

You will get the **solutions** to the exercises near the end of the day.

— FUNDAMENTALS  
**EXERCISE 1**

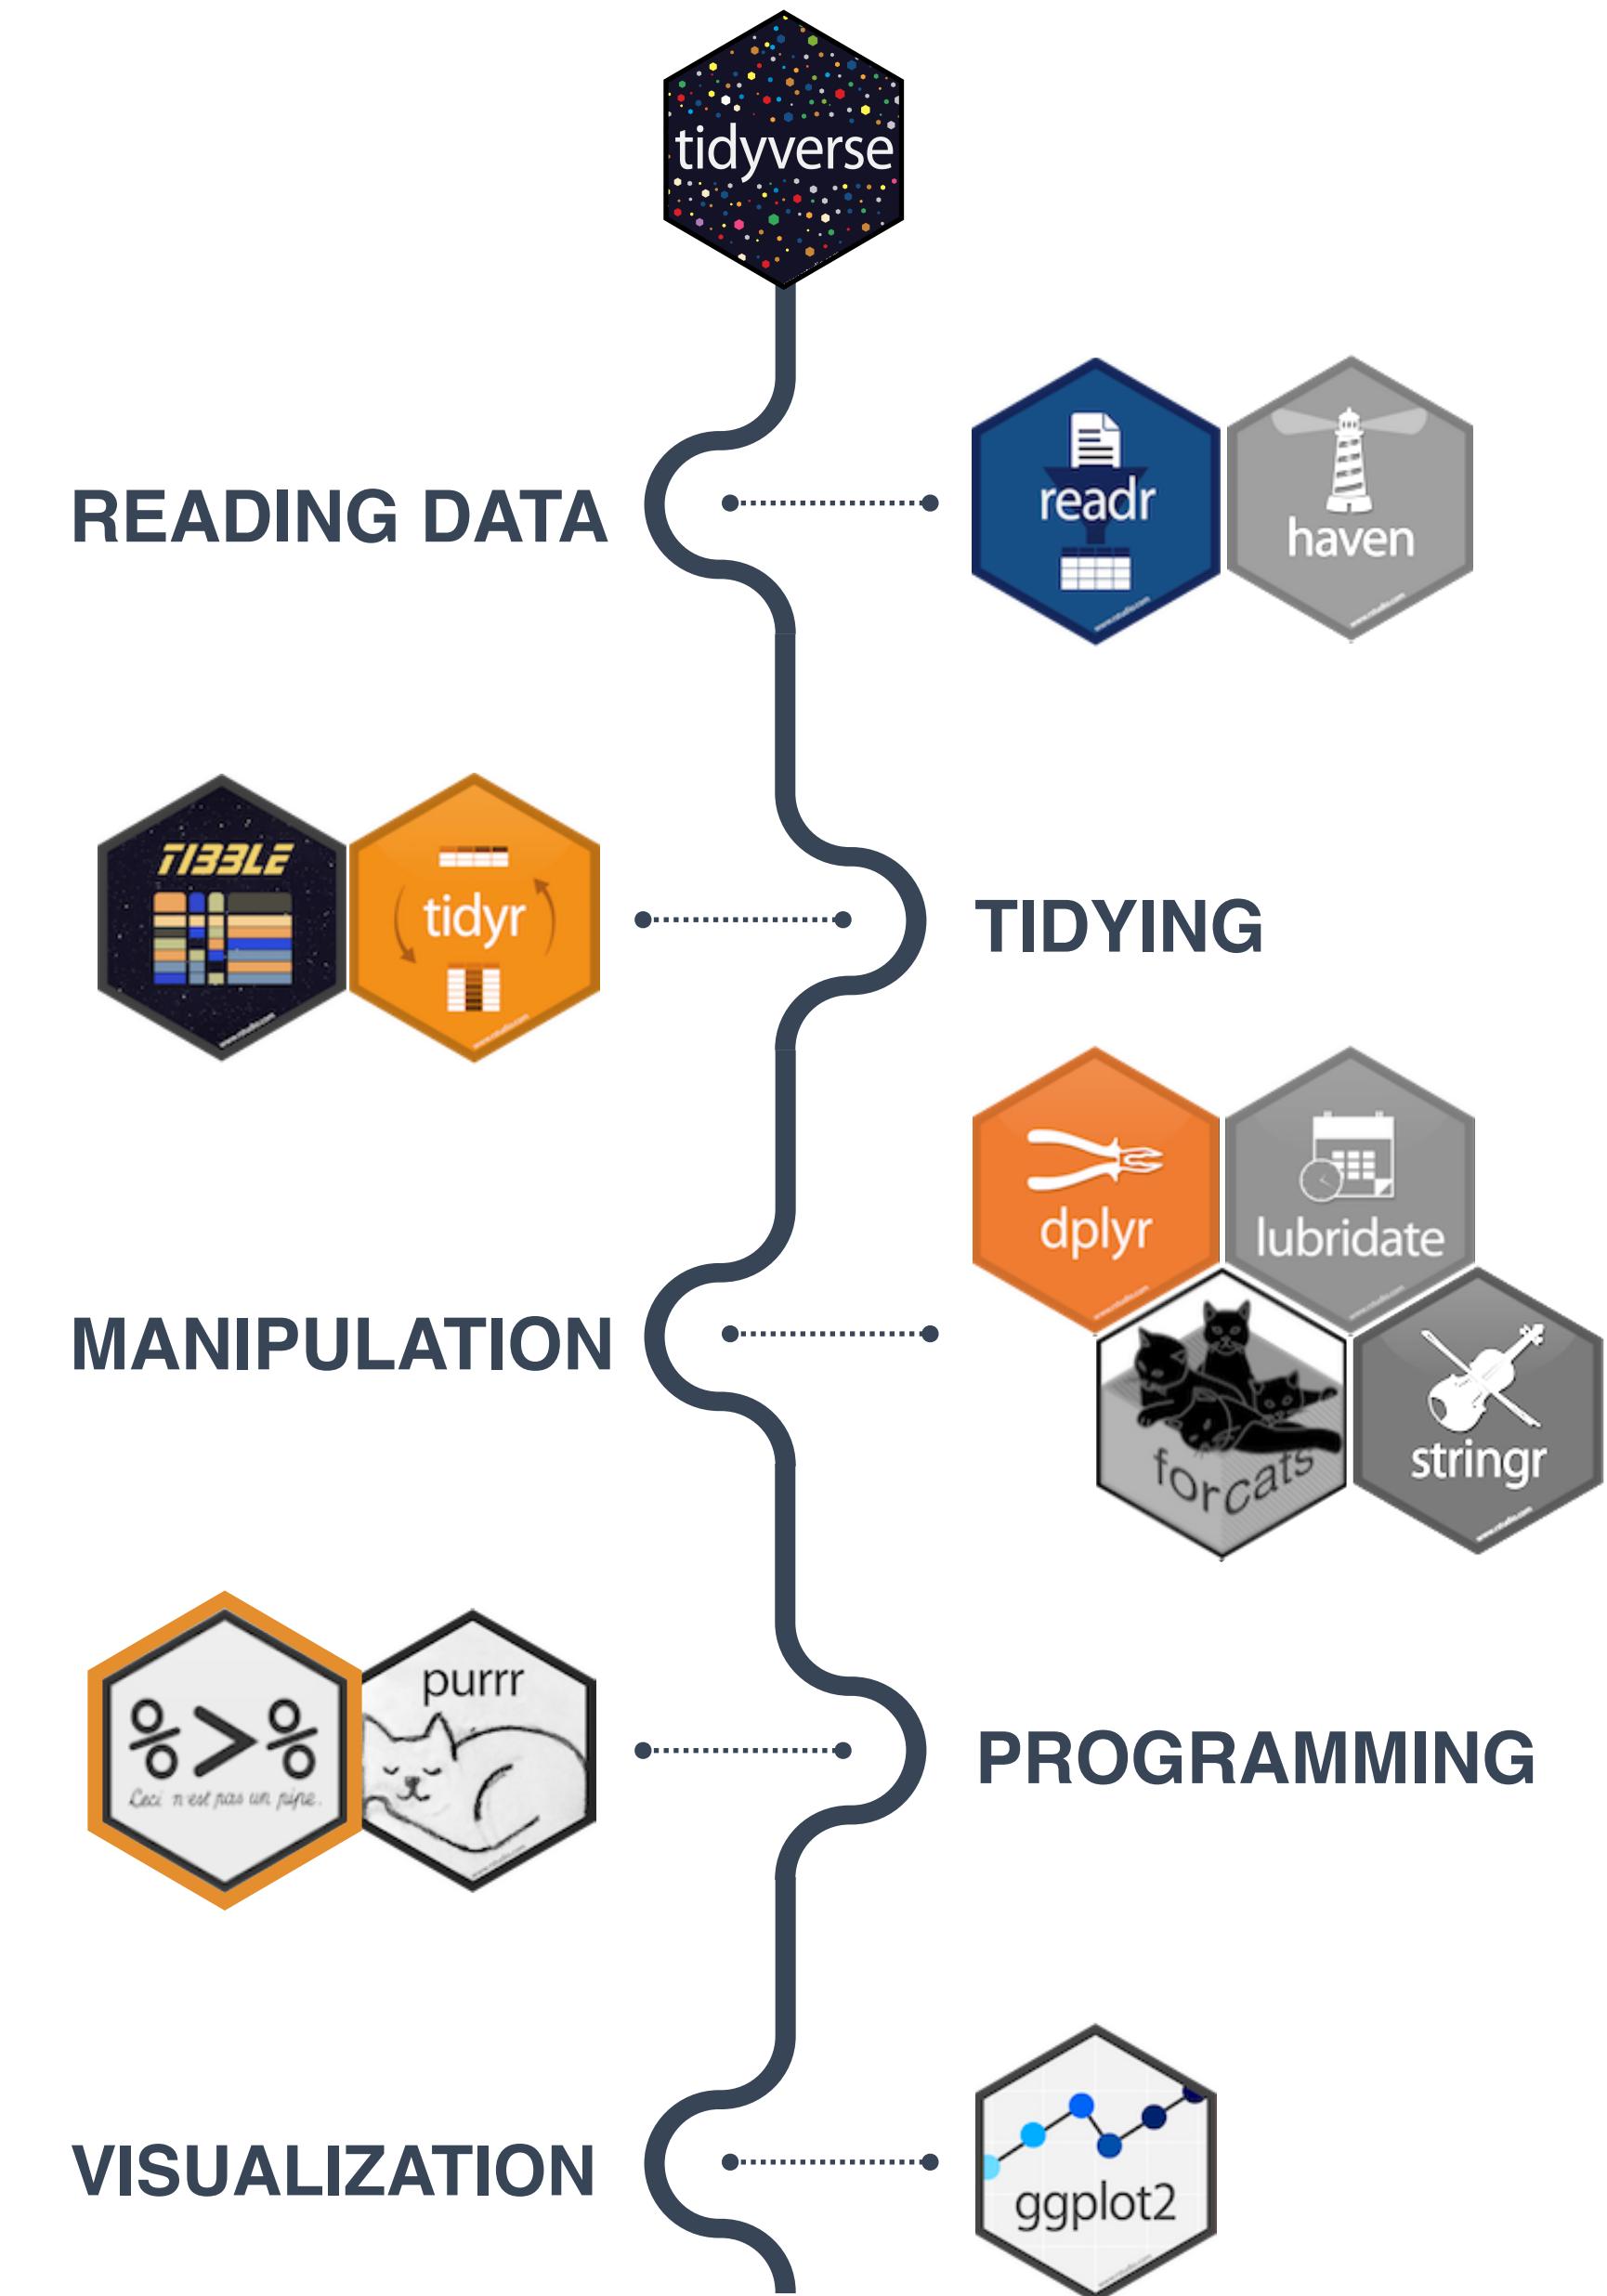

# TIDYVERSE

<https://www.tidyverse.org/>

tidyverse is a collection of R packages for data science

“The packages share an underlying design philosophy, grammar, and data structures.” *Wickham and Grolemund*

tidyverse is used to “tidy up” your datasets, so they are easy to work with

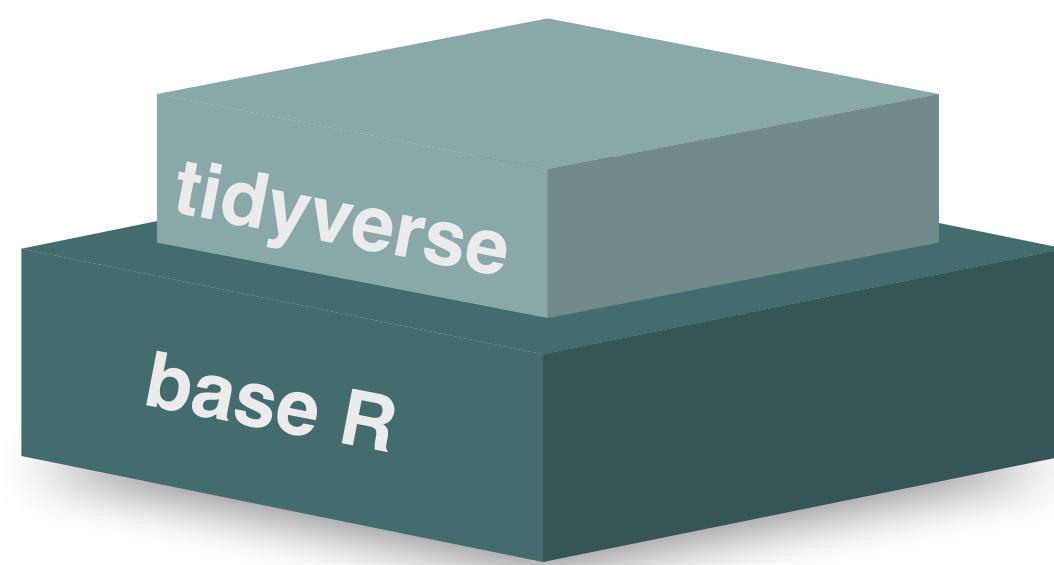

# CECI N'EST PAS UNE PIPE

## %>%

- You do NOT have to “choose” between tidyverse and base R

### BENEFITS

- Short & well-organised code
- Tidy datasets, easy to work with
- Great documentation
- Functions with logical names & inputs

### CONSIDERATIONS

- Can be less stable
- “Different syntax”
- Remember what tidyverse is made for!

### base R

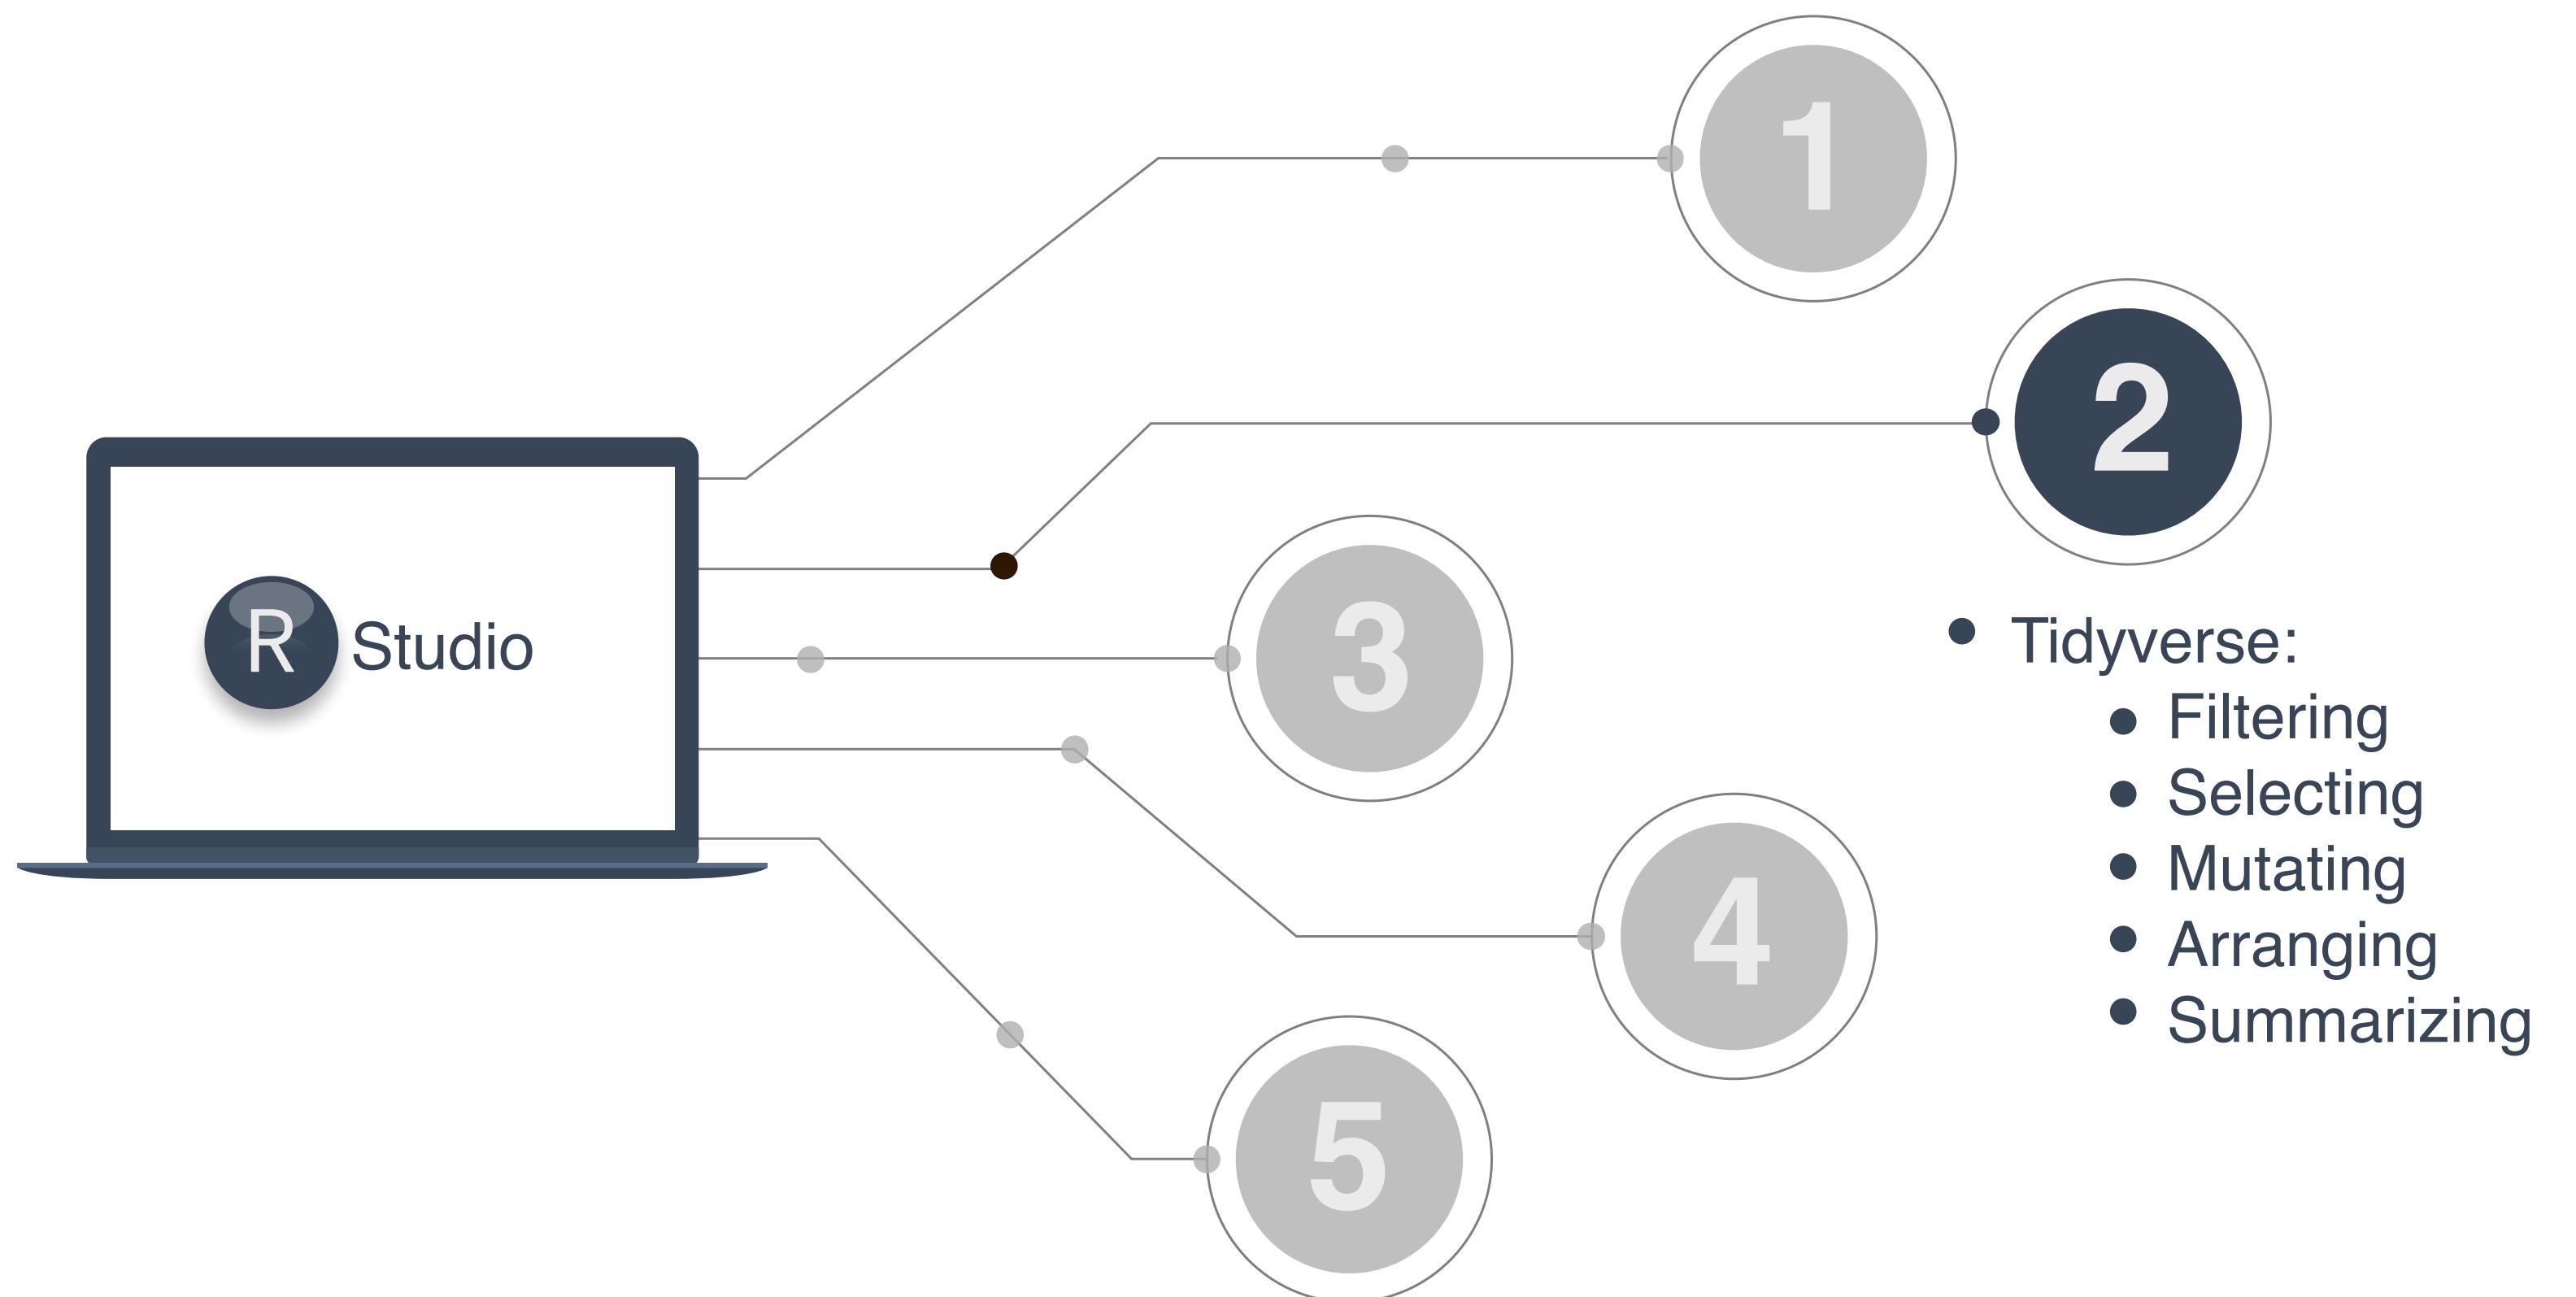

```
# think from the inside out  
g(f(x,y),z)
```

### tidyverse

```
# no brain acrobatics  
x %>% f(y) %>% g(z)
```

pipe symbol

TIDYVERSE  
EXERCISE 2

# TIDYVERSE CHEAT SHEET

*readr, tidyverse, dplyr, ...*

## Read Data (*readr*)

### Reading tabular data

There are solutions for multiple data types  
`read_excel()` # using *readxl* package  
`read_table()`  
`read_csv()`

### Useful arguments

Skip lines: `read_csv(file, skip=1)`  
Read subset: `read_csv(file, n_max=1)`

### Data types

*readr* guesses the types of each column and tells you about it  
("Parsed with column specifications: ...")

## HELP

R Documentation (e.g. enter `?dplyr::filter` and see examples)

Much more info and detailed cheat sheets:

<https://brianward1428.medium.com/introduction-to-tidyverse-7b3dbf2337d5>

It also helps to google "tidyverse + whatever you want to do"

## Data Tidying (*tidyr*)

### Handle missing values

`drop_na()`  
`fill()`  
`replace_na()`

### Subsetting

`tibble[ :,1:5 ]` # returns a tibble  
`tibble$colname` # returns a vector  
(same as `tibble[[colname]]`)

### Reorganize layout

Change between long and wide format  
`gather()` # wide to long  
`spread()` # long to wide

## Data Manipulation (*dplyr*)

### Summary

`summarise()`/`summarize()`  
`count()`

### Group

`group_by()`

Functions will manipulate each group separately and combine results.

### Extract and sort observations # i.e. rows

`filter()` # subset by condition  
`distinct()` # subset to unique values  
`top_n()` # subset by position  
`arrange()` # sort low->high, other way with `desc()`

### Manipulate variables # i.e. columns

`select()`  
`mutate(new_name = f(column))`

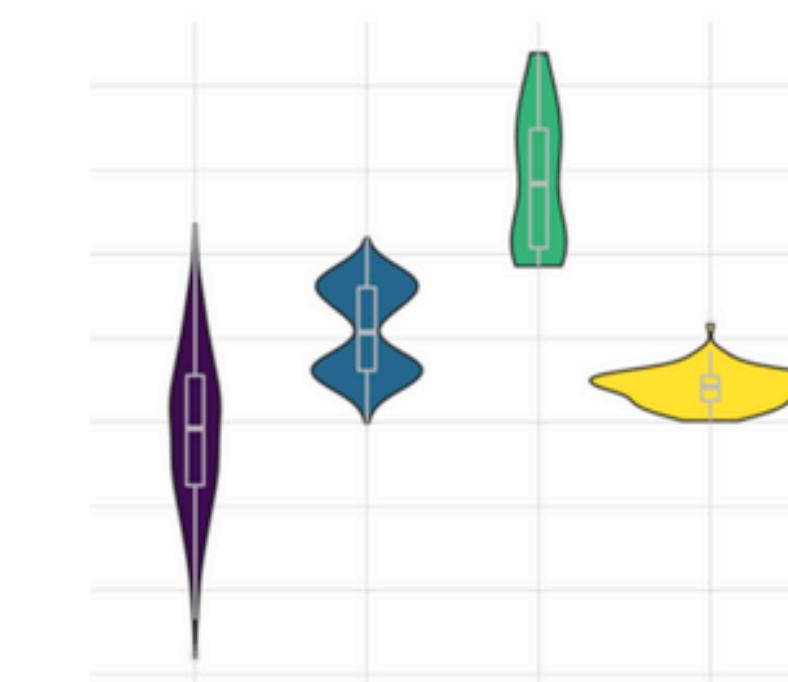

### Vectorised functions

Ranking: `percent_rank()`  
Math: Any arithmetic or logical operations, `between()`,  
`near()`  
`if_else()`

12  
13 This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. The document is a flat text type document which can be read without opening it in RStudio. Making a markdown document is easy, For example, if you want to make something bold use two stars, For italics use underscore, etc. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.  
15  
16 When you click the Knit button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:  
17  
18 Here is a summary of the cars dataset  
19 ```{r cars}  
20 summary(cars)

```

The status bar at the bottom left shows "4:18" and "R Markdown".

The screenshot shows the generated HTML document "RmarkdownTest.html". The content is as follows:
