

FROM  EXCEL TO 

WHO ARE WE?

Center for Health Data Science (**HeaDS**):

- Data Science Research Groups
- HDS Sandbox (Infrastructure Project)
- **SUND Data Lab**

<https://heads.ku.dk/>

SUND Data Lab:

- **Courses & Workshops, Seminars, etc.**
- **Health Data Science Consultations**
- **Commissioned Research & Supervision**
- **Hub for Data Science (Matchmaking)**

Chelsea

Diana

Thilde

Suze

Data Science Laboratory (DSL) - <https://datalab.science.ku.dk/>

FROM EXCEL TO R

THE PRACTICALS

Two days: 9.00-16.00. There will be coffee breaks, we promise ☕

“R for Data Science” - a generally useful book on R, also for this course

The course is build on hands-on presentations & exercises

Download and install the newest version of R (<https://cran.r-project.org/>)

Download and install the newest version of R-studio (<https://posit.co/download/rstudio-desktop/>)

Go to course website: <https://center-for-health-data-science.github.io/FromExceltoR/>

— WELCOME TO FROM EXCEL TO R

WHAT WILL I LEARN?

PROGRAM

DAY 1

08:30 - Installation Issues + Coffee
09:00 - Introduction to R
09:45 - Exercise 0
10:15 - Break
10:30 - Introduction to Quarto
11:00 - Exercise 1
12:00 - Lunch
13:00 – Tidyverse
14:00 - Break
14:15 - Tidyverse Exercise
16:00 - See you tomorrow

DAY 2

08:30 - Coffee + Optional Q&A
09:00 - ggplot2
09:45 - Break
10:00 - ggplot2 Exercise
12:00 - Lunch
13:00 - Applied Statistics
14:00 - Break
14:15 - statistics Exercise
15:30 - Cool things in R + Course Evaluation
15:45 - work on Own Data or analysis Exercise
16:30 - Bye Bye Bye!

— FROM EXCEL TO R

LET'S GET STARTED

R & FRIENDS

Scripting / Programming Language

Reports (html, pdf, word)

R Code Interpreter and Editor

FROM EXCEL TO R

THE ANATOMY OF R

The programming language  may be used from within in the **Code Editor** 

The R code you write may be saved in **scripts** with extensions:   

Functions perform actions based on **input arguments** and return an output: `mean(x)`
`sd(x)`

Packages are bundles/libraries of functions.

PATHS – LOCATION, LOCATION, LOCATION

- The directories on your computer are organized in a **File Tree**
- **Move** between directories or **point to** a place in the tree with a specific file

We do this by specifying a **path**:

- **Move to:** `/abc123/Documents/Research`
- **Point to:** `/abc123/Documents/Research/myData.csv`

Go through Exercise 0 in plenum!

FUNDAMENTALS

EXERCISE 0

INTRO CHEAT SHEET

Basics:

```
getwd() # location
install.packages("package_name") # install packages
library(package_name) # load packages
```

Read in Data:

```
read.xlsx("name.xlsx") # library(readxl)
read.delim("name.txt", sep = "\t")
read.csv("name.csv", sep=";")
```

GETTING
STARTED

Overview:

```
head(df, n=10), tail(df, n=10) # first or last 10 rows
unique(), table(), count() # unique vals, count vals
```

```
view() # view data as table
df$col1 # extract column from dataframe
nrow(df), ncol(df) # number of rows/columns
```

OVERVIEW

Type/Class:

```
class() # get data type/class
is.numeric(x), is.character(), is.factor() # is data type
as.numeric(x), as.character(), as.factor() # change data type
```

Conditions:

```
a == b    a != b    a > b    a < b
a >= b    a <= b    is.na() is.null()
```

DATA TYPES &
CONDITIONS

Summary Stats:

```
summary() # summary statistics
mean(), median(), sd(), sum(), log(), max(),
min(), quantile(), var()
```

Plots:

```
plot(x)
plot(x, y) or plot(col1, col2, df) # scatter
hist(x) # histogram
```

STATISTICS &
BASE PLOTS

QUARTO DOCUMENTS

- Tool which supports **reproducible** coding/publication (reports)
- Quarto works with a **markup language**
- A markup language is **text-coding system** which specifies structure & format of a document and the text within it
- We **render** (compile) a Quarto → html, pdf, word, website

Pointers for quarto:

- Separate sections with headers
- Do not overfill code chunks
- Write meaningful and precise comments

90% of all code comments:

— FROM EXCEL TO R

R DATA TYPES & STRUCTURES

DATA STRUCTURES

DATA TYPES

— FROM EXCEL TO R

LIVE CODING 1 – QUARTO

QUARTO CHEAT SHEET

YAML parameter:

```
---
title: My Project Name
output:
  html_document (pdf_document, ...)
---
```

Code Chunk:

Source mode:

```
```{r}
some R code
```
```

Visual mode:

```
{r}
# some R code
```

GETTING
STARTED

Code Options:

```
{r echo = FALSE} # don't print code (default is TRUE)
{r eval = FALSE} # don't run code (default is TRUE)
{r error = FALSE} # don't display error message (default is TRUE)
(Can also be set for warning and message)
```

Figure Options:

```
fig.align (= 'left', 'right', 'center')
fig.cap (= 'my figure caption')
fig.height (= n), fig.width (= n)
```

CHUNK
OPTIONS

Source mode:

Header

Header size ranging from largest (one #)
to smallest (six #):
my.text, ## my.text, ### my.text, etc.

Text

```
*italics*
**bold**
`highlighted`
```

Lists

```
* List item1 (filled dot)
  + sub-item1 (open dot)
1. List item1 (numbered)
  i) sub-item1 (roman)
```

TEXT

QUARTO EXERCISE 1

<https://www.tidyverse.org/>
TIDYVERSE

tidyverse is a collection of R packages for data science

“The packages share an underlying design philosophy, grammar, and data structures.” *Wickham and Grolemund*

tidyverse is used to “tidy up” your datasets, so they are easy to work with

CECI N'EST PAS UNE PIPE

%>%

- You do NOT have to “chose” between tidyverse and base R

BENEFITS

- Short & well-organised code
- Tidy datasets, easy to work with
- Great documentation
- Functions with logical names & inputs

CONSIDERATIONS

- Can be less stable
- “Different syntax”
- Can be computationally slow

base R

```
# think from the inside out  
g(f(x, y), z)
```

tidyverse

```
# no brain acrobatics  
x %>% f(y) %>% g(z)
```

↑ pipe symbol

— FROM EXCEL TO R

LIVE CODING 2 – TIDYVERSE

TIDYVERSE CHEAT SHEET

readr, tidyr, dplyr, ...

Read Data (*readr*)

Reading tabular data

There are solutions for multiple data types

`read_excel()` # using *readxl* package

`read_table()`

`read_csv()`

Useful arguments

Skip lines: `read_csv(file, skip=1)`

Read subset: `read_csv(file, n_max=1)`

Data types

`readr` guesses the types of each column and tells you about it

("Parsed with column specifications: ...")

Workflow

Tidyverse workflow

```
df %>%  
  select(col1)
```

```
df %>%  
  filter(col1 < x)
```

```
df %>%  
  summarize(n_1 = n(),  
            avg_1 = mean(col),  
            sd_1 = sd(col1))
```

Select column

```
df$col1
```

Data Manipulation (*dplyr*)

Summary

```
summarize()
```

```
count()
```

Group

```
group_by()
```

Functions will manipulate each group separately and combine results.

Extract and sort observations (rows)

```
filter() # subset rows by condition
```

```
distinct() # subset to unique values
```

```
top_n() # subset by position
```

```
arrange() # sort low->high, other way with desc()
```

Manipulate variables (columns)

```
select() # subset rows by condition
```

```
mutate(new_name = f(column))
```

```
mutate(new_name = ifelse(col1 < x, "Yes", "No"))
```

```
mutate(new_name = col1 + col2)
```

HELP

R Documentation (e.g. enter `?dplyr::filter` and see examples)

Much more info and detailed cheat sheets:

<https://brianward1428.medium.com/introduction-to-tidyverse-7b3dbf2337d5>

It also helps to google "*tidyverse + whatever_you_want_to_do*"

TIDYVERSE EXERCISE 2

GGPLOT2 - EASY GRAPHICS

Aesthetically pleasing graphics.

Well-defined “additive” (+) structure.

Integrates perfectly with tidy data.

Great documentation & community

GGPLOT2

ADDITIVE STRUCTURE

```
ggplot(data,  
  aes(X, Y,  
    color, fill, size, group, alpha..)) +  
  geom_line()
```

Aesthetics

Mapping variables to groups or magnitudes - color, fill, group (all grouping variable), size, shape, etc.

Geoms

geom_point()
geom_boxplot()
geom_histogram()
Inherit global aesthetics, Overlay

GGPLOT2 ADDITIVE STRUCTURE

```
ggplot(data,  
  aes(X, Y,  
    color, fill, size, group, alpha..)) +  
  geom_line()
```

GGPLOT2

ADDITIVE STRUCTURE

```
ggplot(data,  
       aes(X, Y,  
           color, fill, size, group, alpha..)) +  
  geom_line() +  
  facet_wrap(type) +  
  scale_y_log10() + scale_color, size, linetype..  
  geom_smooth() + smoothing, error bars, etc.  
  theme_bw() theme_minimal, classic, dark  
             labs(title, xlab, ylab..)
```

— FROM EXCEL TO R

LIVE CODING 3 – GGPLOT 2

GGPLOT CHEAT SHEET

Define Plot:

```
ggplot(data = my.data,  
       aes(x = x.var,  
           y = y.var))
```

Add Plot Type:

```
... + geom_point() # scatter plot  
... + geom_line()  
... + geom_boxplot()  
... + geom_col()  
... + geom_density()  
... + geom_histogram()
```

GET
STARTED

One Color:

```
ggplot(..., aes(...),  
       color = "green")
```

Color Fill by Group:

```
ggplot(..., aes(...,  
               fill = z.var))
```

Custom Colors:

```
... + scale_*_manual(values = c())  
ex: scale_color_manual(values = c("blue", "pink"))
```

COLORS

More Colors:

```
... + scale_fill_grey(start = 0.2, end = 0.8)  
... + scale_fill_gradient(low="white", high="red")
```

Labels:

```
... + labs(title = "Title",  
           x = "X label",  
           y = "Y label")
```

COLOR SCALES
& THEMES

Theme: ... + theme_bw()
... + theme_minimal()
... + theme_dark()
... + theme_classic()

Text:

```
... + theme(legend.position = *)  
* = "none", "top", "bottom", "left", "right"
```

TEXT

GGPLOT2 EXERCISE 3

<http://www.sthda.com/english/>

R - A STATISTICAL SCRIPTING LANGUAGE

MODEL FUNCTIONS

```
lm(), glm()  
lmer(), glmer(),  
nls(), ...
```

EMMEANS PACKAGE

```
emmeans(),  
pairs(), cld()
```

APPLY TO MODEL

```
summary(), anova(),  
confint(), predict(),  
drop1(), update(),  
step(), ...
```

MORE FUNCTIONS

```
t.test(), cor(),  
cor.test(), aov(),  
quantile(),  
p.adjust(),  
rank(), ...
```

Let's use R in a statistical analysis

YOU

The researcher with R skills!

YOUR DATA

Gene expression data, i.e. how much a gene is used to produce a protein. Multiple genes measured in one experiment.

YOUR DISEASE OF INTEREST

Psoriasis, an immune-mediated skin disorder.

R - A STATISTICAL SCRIPTING LANGUAGE

During this session:

- *Cooperatively* discuss and share ideas about the data
- Apply steps of basic statistical analysis for hypothesis testing consistent with the given data
- Suggest conclusions based on your analysis, regarding the association between psoriasis and gene expression levels

— FROM EXCEL TO R

LIVE CODING 4 – APPLIED STATS

STATS CHEAT SHEET

Import Data:

```
read_excel("my.data.xlsx")
```

Overview of Data:

```
summary(my.data)      length(my.data)  
nrow(my.data)         names(my.data)
```

GET
STARTED

Linear:

```
lm(y~x, data=my.data)  
confint(model)
```

Logistic:

```
glm(y~x,  
data=my.data)
```

Linear Mixed:

```
lmer(y~x + (1|z),  
data=my.data)
```

Check Model:

```
summary(model)  
par(mfrow=c(2,2))  
plot(model)
```

REGRESSION
MODELS

ANOVA:

```
anova(model2, model1)
```

F-Test:

```
drop1(model, test="F")
```

Emmeans:

```
emmeans(model, ~x)  
pairs(emmeans(model, ~x))  
predict(model, newdata)
```

TESTS/
COMPARISONS

Check Type:

```
table(my.data$x)  
is.numeric(my.data$x)  
is.factor(my.data$x)
```

Change Type:

```
mutate(my.data, x = factor(x))  
fct_collapse(x)
```
